### **DETAILED ACTION**

This office action is in response to the filing of the request for reconsideration on 11 April 2007. Claims 98-135 are pending; claims 102-106, 124-126 and 135 are withdrawn from consideration.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please cancel claims 102-106, 124-126 and 135.

### ***Allowable Subject Matter***

Claims 98-101, 107-123 and 127-134 are allowed.

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: referring to claim 98, prior art does not anticipate, teach, or suggest wherein the isolation gate extends beyond the isolation region.

Referring to claim 107, prior art does not anticipate, teach, or suggest forming an isolation gate over at least a portion of the active layer substantially surrounding the photosensor.

Referring to claim 119, prior art does not disclose, anticipate, teach, or suggest forming an isolation gate over at least a portion of the isolation regions; wherein the isolation gate substantially surrounds the pixel.

Referring to claim 132, prior art does not disclose, anticipate, teach or suggest forming an isolation gate over at least a portion of the active layer adjacent the photosensor; and biasing the isolation gate with a voltage.

For example, Cole (2007/0120214) discloses a method of forming an image sensor comprising the steps of forming a pixel within a substrate; forming an isolation region adjacent to said pixel; and forming an isolation gate over said isolation region. However Cole does not disclose, anticipate, teach, or suggest wherein said isolation gate extends beyond said isolation region and over at least a portion of a connection region formed adjacent to said isolation region.

Nozaki et al. (6,570,222) discloses forming a CMOS image sensor comprising forming a pixel within a substrate and forming an isolation region adjacent the pixel. Nozaki et al. discloses forming an isolation region around at least a portion of the pixel and forming an isolation gate over at least a portion of the isolation region (STI). However, Nozaki et al. does not disclose, anticipate, teach or suggest wherein said isolation gate extends beyond said isolation region and over at least a portion of a connection region formed adjacent to said isolation region.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
